

Wet 'n' Shine Lipgloss

Easy cold process lip gloss formulation, which has high shine and bright colours based on the coloured Creaspheres® SIL. Coloured Creaspheres® silica beads give smooth glide and softness in combination with bright shades. Creastar® pearlescent pigment reflect shine and colour from the matte silica bead base and, hence they give a multidimensional shine effect. Creagel® Crystal HPB together with Creagel® Crystal AF forms a long lasting, water resistant, high shine film on the lips. Creagel® Crystal products are ideal for lip gloss applications as their pseudoplastic behaviour keeps the lip gloss on the lips and stops bleeding around the lip area. Creagel® Crystal allows high pigment loading as it forms a structure which holds the pigments preventing the sedimentation of the particles. Creasil® 11ID dries off creating a water resistant film which improves the long lasting qualities.

Ingredients	INCI Name	Qty%	Supplier
Creagel® Crystal HPB	Hydrogenated Polyisobutene (and) Ethylene/Propylene Copolymer	26,60	1)
Creasil® TDTM	Tridecyl Trimellitate	26,60	1)
Creasil® 11ID	Isododecane (and) Dimethicone (and) Polyethacrylate	1,52	1)
Creagel® Crystal AF	Hydrogenated Polydecene (and) Ethylene/Propylene Copolymer	21,28	1)
Creaspheres® SIL WL 3 Colours O5	Silica (and) CI 45370 (D&C Orange 5)	19,00	1)
Creastar® Primary Sunstone WL100	Calcium Aluminium Borosilicate (and) Titanium Dioxide (and) CI 16035 (D&C Red 40)	5,00	1)

Procedure:

1. Mix all ingredients together. No heating necessary.
