VEGEFLOW®

» NO SUBSTITUTE FOR SAFETY IN FORMULAS

The natural way to replace silicones and dimethicone for safe and SVHC free cosmetics.

Our **Vegeflow®** series are safe substitutes for cosmetics.

ECHA recently regulated that cyclomethicone materials and notably D-4, D-5 and D-6 are defined as SVHC materials with two types of bio-persistence.

Vegeflow® offers that rare moment to "bring back safety" to formulas and really offer safety to the cosmetic consumer.

What are Vegeflow® and their unique characteristics:

They are based on natural materials, engineered to bring silicone feel and even better performance than Dimethicone, which has traces of much more than 0.1% content of D-4, D-5 and D-6 volatiles.

The ECHA level use of the above to avoid warning labelling on packaging is only at 0.1%.

Vegeflow® have very long oxidation stability index on par with silicones well over 2000 minutes at 100°C and have a very long lasting low peroxide values and are therefore considered very inert materials.

Vegeflow® are photostable and ideal for all day time skin care, colour care applications and also sun care. They do not age your skin by photoreactivity in day conditions.

Vegeflow® are colourless, odourless, tasteless with great slip and soft textures. **Vegeflow®** are more easy to emulsify and stabilise than silicones due to a very high negative surface charge called Zeta Potential. Nice, fast and easy to use in your formulations.

Vegeflow® offer various viscosities, refractive index and textures.

Vegeflow® very importantly bring ready to go derivatives for special formulas.

Vegeflow® are above all non bio-available emollients, so different from silicones.

Vegeflow® are for now the only range of safe emollients that replace all the characteristics of Dimethicone with real safety of use for your skin.

Vegeflow® are of course ideal for worldwide approved formulas, ideal for day time and are great at night time as they are irritant and allergen free.

Only from The Innovation Company® with our ethics of "no substitute for safety first".
